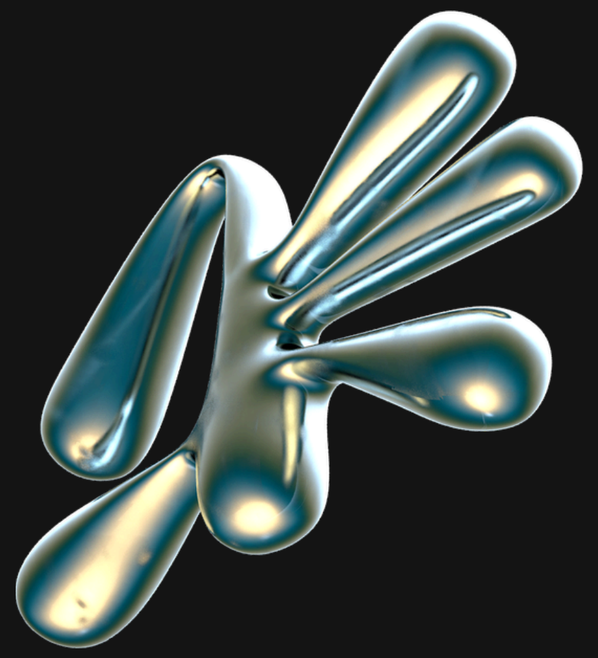
Nguyen Ngoc Chau

Tran Le Minh Khoi

Nguyen Thanh Tai

1.Database schema highlight.

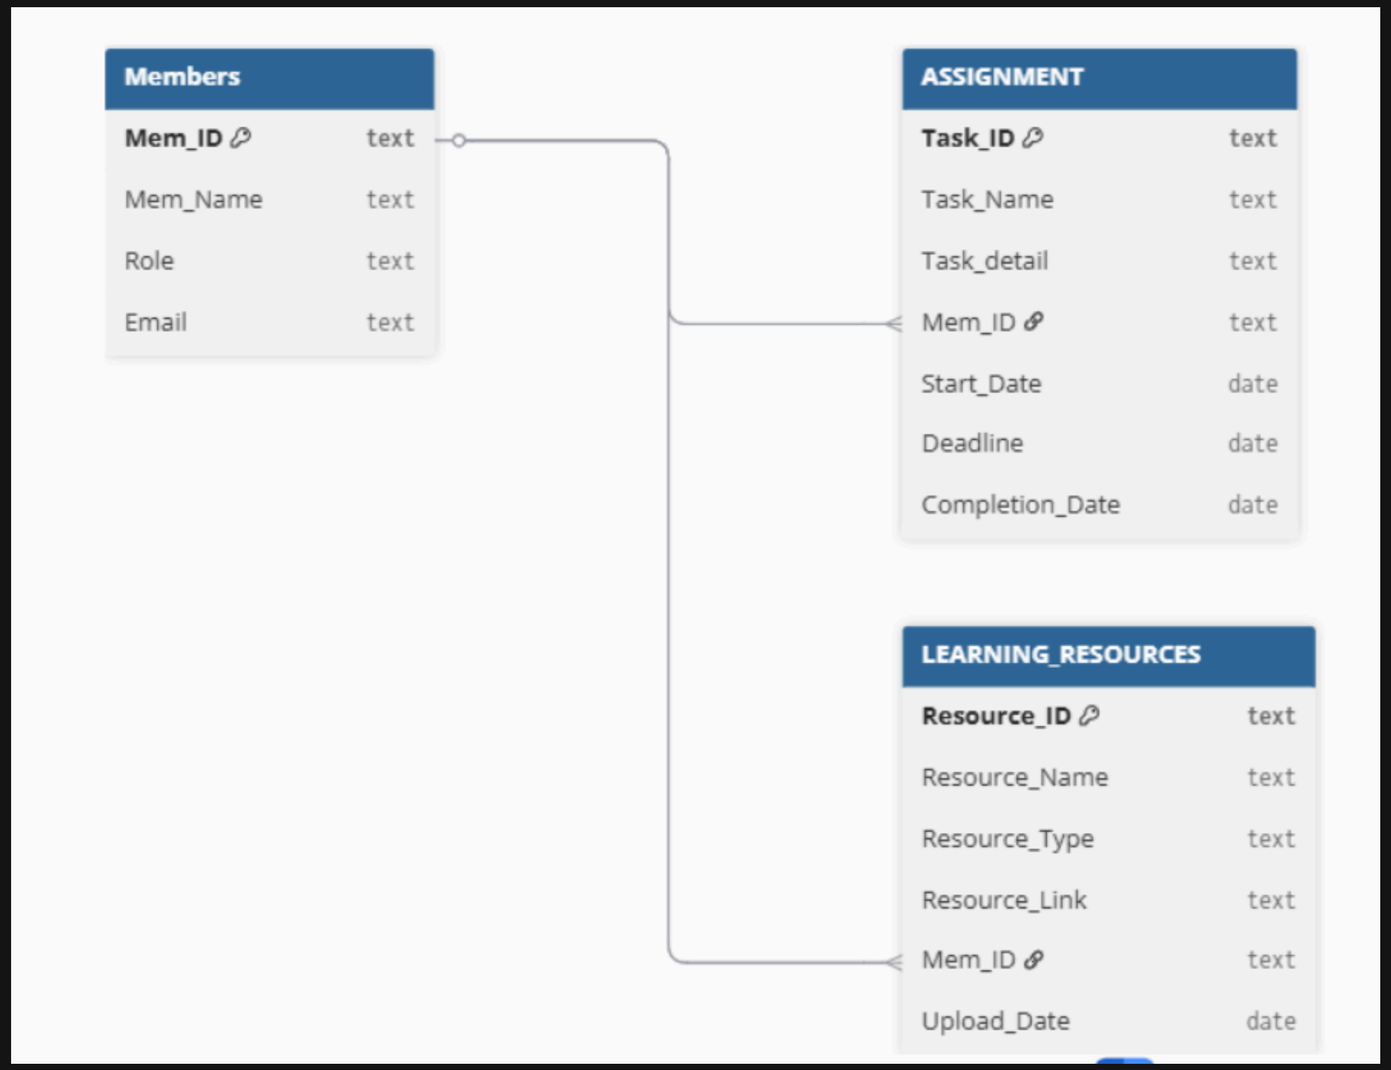


- The system consists of three main entities

- A one-to-many relationship each member can have multiple assignments

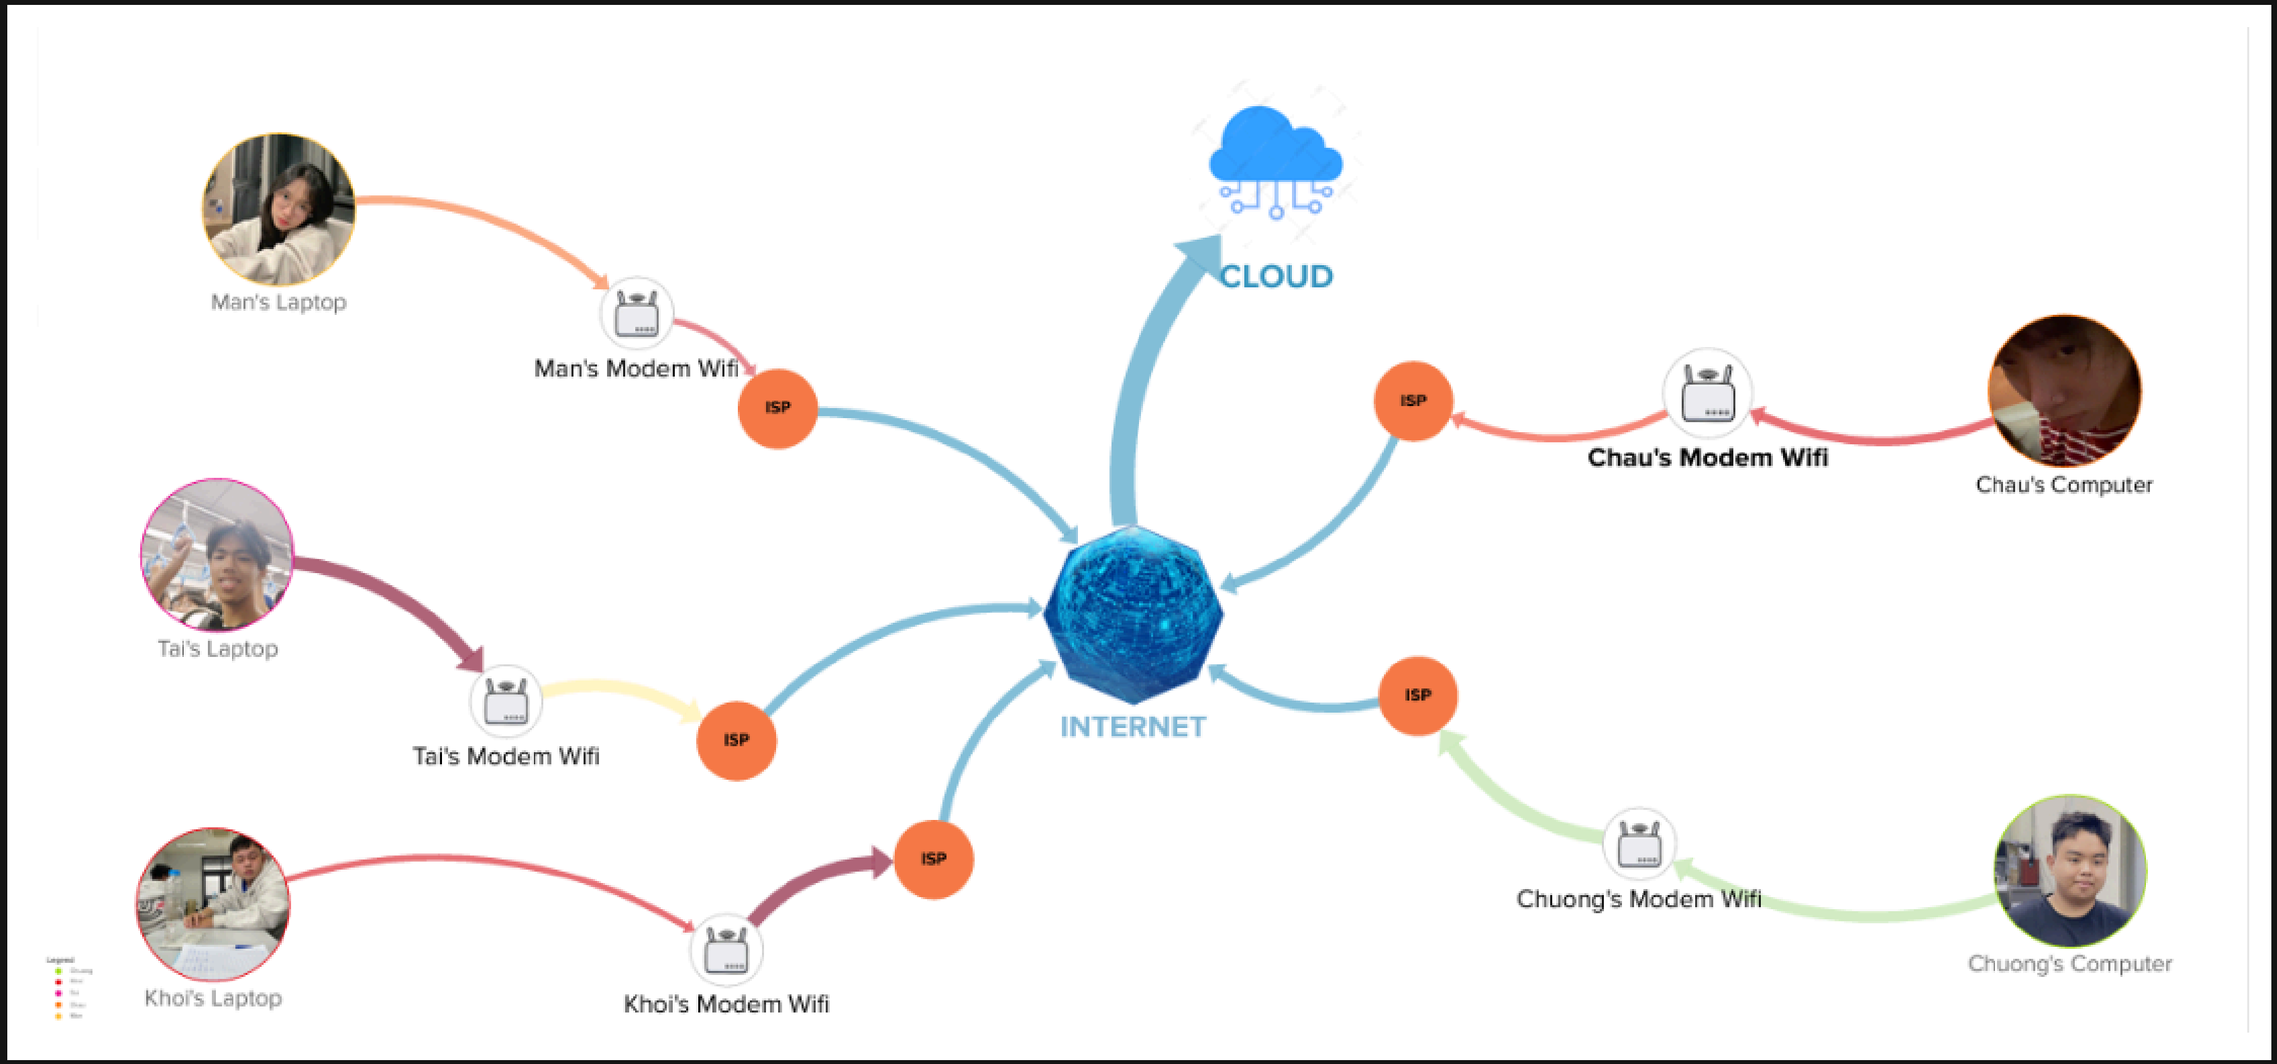
- The use of foreign key (*Mem_ID*) ensures data integrity
- The schema supports full task lifecycle tracking
- Learning resources are managed and linked directly

- The design is clean and normalized
- The structure is scalable and can be extended
- Dynamic Logic: Task status is calculated dynamically



ERD (Entity-Relationship Diagram).

2.Network Topology Highlights



Man's Laptop
Man's Modem Wifi

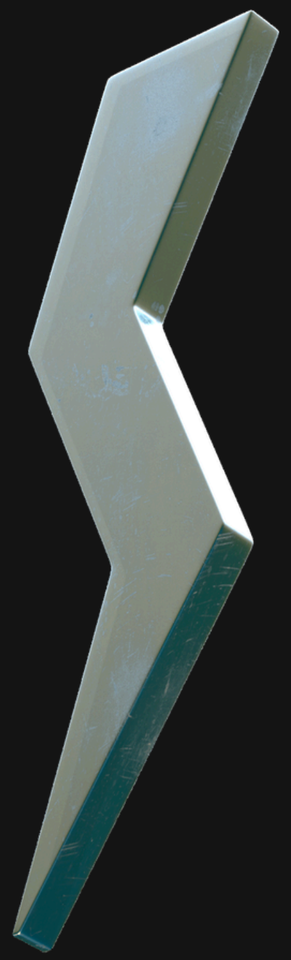
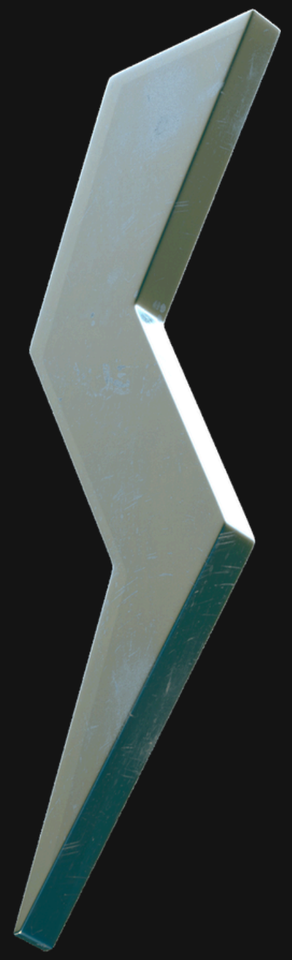
Khoi's Laptop
Khoi's Modem Wifi
ISP
Chuong's Modem Wifi
Chuong's Computer

- The network follows a distributed structure
- All devices are connected to the Internet via ISP
- Cloud-Based Model: Centralized data storage to enhance team collaboration



- The topology supports remote access
- Each device is linked to a specific user
- The system is simple and easy to deploy

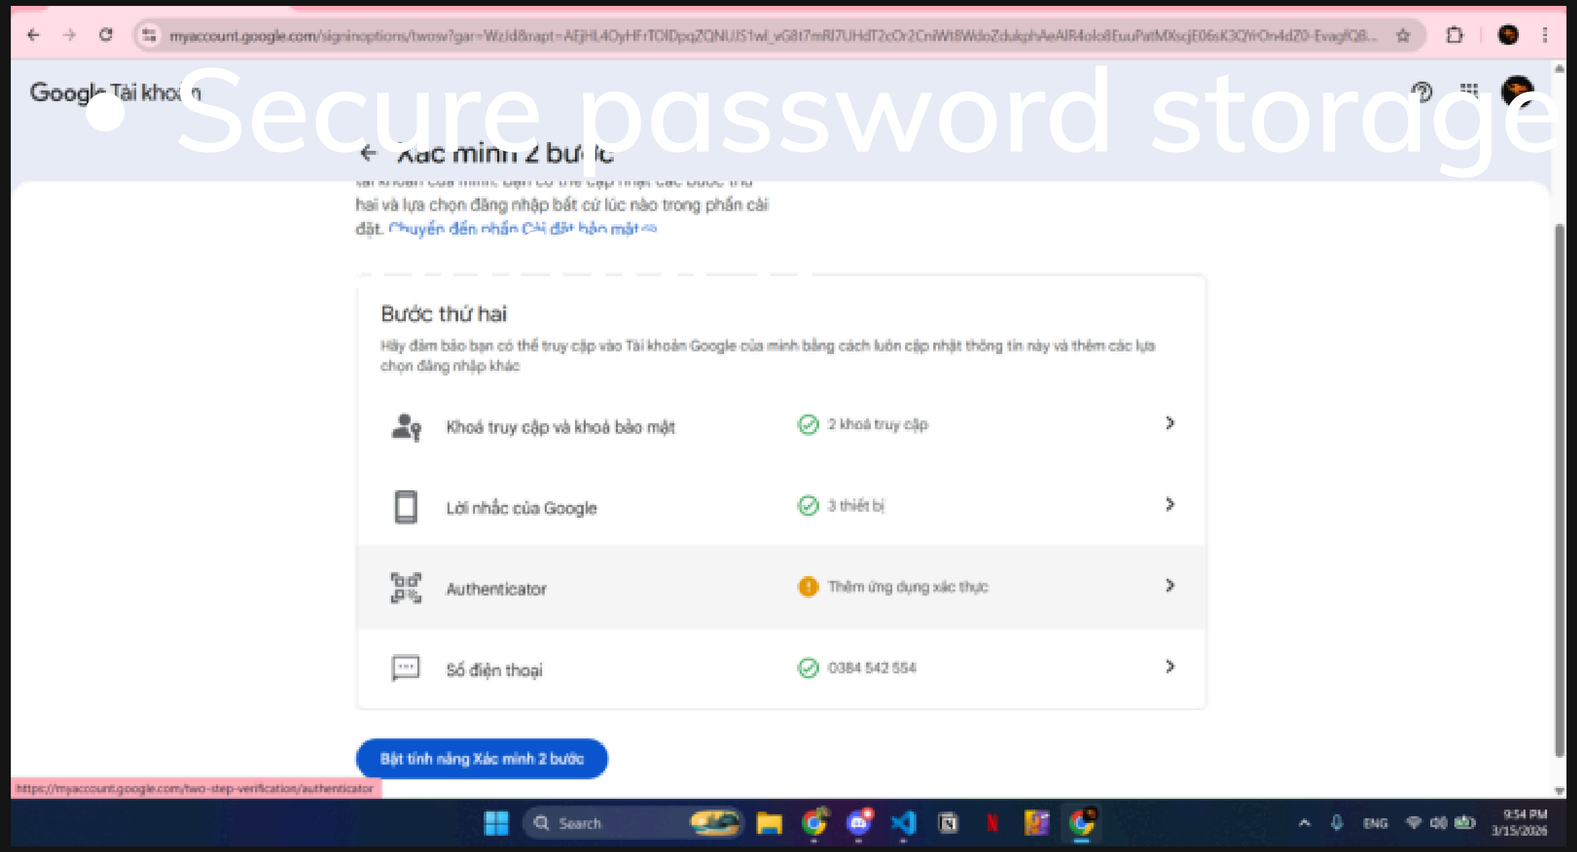
3. Security Audit Highlights



- Complexity Standards: Mandatory mix of uppercase, lowercase, numbers
- Passwords are not shared and must be unique
- Regular password updates are enforced

- Two-Factor Authentication (2FA) is enabled
- 2FA is implemented using an authentication app

- Secure password storage is



2-Step Verification.

4.AI Prompts Highlights

- AI was used to assist
- Prompts were focused on practical problems
- AI provided suggestions for table organization and SQL logic

- AI also guided the ERD creation process
- All AI outputs were verified manually
- AI was used as a supporting tool and results were cross-checked
